

Executes Python code...

1. Authenticates with Tableau Server
2. Checks to see if the needed Webhooks (workbook-created, workbook-updated) are installed on Tableau Server.
3. Installs those Webhooks if they are not.
4. Downloads the Workbook from Tableau Server that was passed to the function from the Webhook payload.
5. Parses the Workbook and validates the style contents against a given style guide file.
6. Authenticates and shares the validation results to a given Slack workspace.
